

```
public class ComputeBean{
    Validator validator;
    public double compute(double n1, double n2){
        if (!validator.iszero(double num))
            return n1/n2;
        else
            // error: divided by 0
    }
}
```

```
public class ValidatorBean{
    public boolean iszero(double num){
        if (Math.abs(num < 0.0001))
            return true;
        else
            return false;
    }
}
```
